

**DIPLOMA CURRICULUM OF
CHEMICAL ENGINEERING
(THIRD YEAR)
(5th Semester)**

(To be implemented from 2026-27)

Prepared by;

**National Institute of Technical Teachers' Training & Research Kolkata
Block – FC, Sector – III, Salt Lake City, Kolkata – 700106**

Vetted by:

Domain experts from Polytechnics of Odisha

**State Council for Technical Education & Vocational Training
Near Raj Bhawan, Unit-VIII, Bhubaneswar, Odisha**

PROGRAMMETITLE: CHEMICAL ENGINEERING

SEMESTER – V

SL. No	Category of Course	Code No	Course Title	Teaching Scheme				Evaluation Scheme				Total Marks	Credits
				Pre-requisite	Contact Hours/ week			Theory		Practical			
					L	T	P	End Exam	Progressive Assessment	End Exam	Progressive Assessment		
1	Programme Core	CHEPC301 TH:1	Chemical Reaction Engineering		3	0	0	70	30	-	-	100	3
2		CHEPC303 TH:2	Mass Transfer -II		3	0	0	70	30	-	-	100	3
3		CHEPC305 PR:1	Chemical Reaction Engineering Lab		0	0	4	-	-	15	35	50	2
4		CHEPC307 PR:2	Mass Transfer – II Lab		0	0	4	-	-	15	35	50	2
5	Programme Elective	CHEPE301 (Any one) TH:3	(A)Energy Engineering (B)Process Control & Instrumentation (C)Instrumental Method of Analysis		3	0	0	70	30	-	-	100	3
6		CHEPE303 (Any one) TH:4	(A)Petroleum Refining & Petrochemical Technology (B)Modern Separation Techniques (C)Pharmaceutical Technology		3	0	0	70	30	-	-	100	3
7		CHEPE305 (Any one) PR:3	(A)Computer Applications in Chemical Engineering (B)Fuel Technology Lab		0	0	4	-	-	15	35	50	2
8	Open Elective	Open Elective – I OE301 (Any One) TH:5	(A)Universal Human Values (B)Leadership and Management Skills (C)Professional Skills		3	0	0	70	30	-	-	100	3
9	Summer Internship	SI301	SUMMER INTERNSHIP II*		0	0	0	-	-	15	35	50	2
10	Major Project	PR301 PR:4	MAJOR PROJECT (PHASE – I)		0	0	4	-	-	15	35	50	2
TOTAL					15	0	16	350	150	75	175	750	25

*3-4-weeks internship after 4th Semester

***The best of 2 IA conducted in a subject out of 20 marks to be considered. Assignment/ quiz etc. of 10 marks to be treated as part of IA. Besides this, Monthly Test to be conducted for each subject. Sessional Marks shall be total of the performance of individual different jobs/ experiments in a subject throughout the semester. Club/Innovation/ Idea Tinkering Activities etc. shall be encouraged to be performed by students beyond the above stipulated hours.**

SEMESTER - V

TH:1- CHEMICAL REACTION ENGINEERING

L	T	P	Total Marks: 100	Course Code: CHEPC301
3	0	0		Theory Assessment
Total Contact Hours				End Term Exam 70
Theory : 45Hrs				Progressive Assessment : 30
Pre Requisite : Nil				
Credit 3				Category of Course: PC

RATIONALE:

This subject is of great importance in chemical engineering profession. It is necessary to study the principles of kinetics and catalysis, which will provide knowledge in understanding chemical reaction mechanisms. The primary purpose of chemical reaction engineering is optimization of chemical reactors, feed composition and operating conditions.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Define the kinetics rate and feasibility of different type of reactions.
- Classify chemical reactions, factors affecting the rate of reaction
- Interpret the effect of temperature on rate constant and rate of reaction
- Derive rate expression for different order reaction and relate rate of reaction with design equation.
- Determine optimal ideal reactor design for multiple reactions for particular yield.
- Analyze the laboratory data for determining the order of reaction and reaction rate constant

COURSE CONTENT DETAILS:

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
I	CHEMICAL KINETICS: Classification of chemical reaction; Rate of reaction; Rate constant; Elementary and non-elementary reaction; Molecularity and Order of reaction; Arrhenius equation; Concept of activation energy	8
II	INTERPETATION OF BATCH REACTOR DATA: Derivation of integrated rate equation for irreversible uni-molecular type of different order reactions (First-order reaction, Second order reaction, Zero order reactions); Half-Life method; Basic idea about constant volume and variable volume batch reactor (no derivation); Solve numerical based on the topics.	12
III	IDEAL REACTORS: Principle, Operation, Applications, Material Balance, Performance Equation of Batch Reactor, Continuous Stirred Tank Reactor, Plug Flow Reactor; Space velocity Space-time, Residence time	15

IV	CATALYSIS: Definition of catalysis and its classification with example (Homogeneous, Heterogeneous, Enzymatic and Auto-catalytic); Characteristics of catalytic reaction; Role of Catalyst; Promoter, Inhibitors, Carriers, Enzymes; Catalytic poisoning,	4
V	CHEMICAL EQUILIBRIUM: Definition and characteristics of Chemical Equilibrium; Reversible reaction with example; Equilibrium Constant; Law of Mass action; LeChatelier's Principle; Hess's Law	6
Total		45

TH:2- MASS TRANSFER – II

L	T	P	Total Marks: 100	Course Code: CHEPC303
3	0	0		Theory Assessment
Total Contact Hours				End Term Exam 70
Theory : 45Hrs				Progressive Assessment : 30
Pre Requisite : Nil				
Credit 3				Category of Course: PC

RATIONALE:

Mass Transfer is the Basic Subject of Chemical Engineering. A Chemical Engineer should know that how an operation is taking place in process industry. Mass Transfer tells us the mechanisms and Concentrations between different phases. All the basic operations in industries are based upon mass transfer. So to understand the mechanism of transfer due to difference in concentrations is explained by mass Transfer.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Explain the concepts of mass transfer operations like humidification, drying, extraction, leaching and crystallization.
- Describe working principle of various mass transfer equipment used in industry and its application.
- Solve simple problems of mass transfer

COURSE CONTENT DETAILS:

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
I	Humidification and Dehumidification: Wet and dry bulb temperature; The principle of wet bulb temperature theory; Illustrate humidity chart and explain different methods of measurement of Humidity; Different methods of humidification and dehumidification; The construction and working of natural and mechanical draft cooling tower; Solve simple problems	11
II	Drying: Concept of drying; Moisture content-equilibrium; Bound moisture, Unbound moisture, Free moisture, Critical moisture content, Equilibrium moisture content; The methods of removing liquids from solids; Illustrate constant rate and falling rate period; The construction and working principle of tray dryer, rotary dryer, spray dryer, fluidized bed dryer, dryer for heat sensitive materials; Solve simple problems	13
III	Extraction: Difference between distillation and extraction; Steps followed in liquid-liquid extraction; Selection of solvent for extraction; Distribution Coefficient; Mixer-Settler for batch	6

	operation; Applications of liquid-liquid extraction equipment (Sieve Tray Tower, Spray tower, Packed tower, Rotating disk contactor, Pulse column)	
IV	Leaching: Principle of leaching; Examples of leaching operation; Factors affecting the rate of leaching. Applications of different industrial leaching equipment	5
V	Crystallization: Concept of crystallization; Principle of crystallization; Supersaturation; Mechanism of crystallization; Yield of crystallization process; Effect of impurities on crystal formation; Caking of crystals; Construction, Working and application of Swenson-Walker Crystalliser; Material balance of crystalliser	10

PR:1- CHEMICAL REACTION ENGINEERING LAB

L	T	P	Total Marks: 50	Course Code: CHEPC305
0	0	4		
Total Contact Hours				Practical Assessment
Practical : 60Hrs				End Exam 15
				Progressive Assessment : 35
Pre Requisite : Nil				
Credit 2			Category of Course: PC	

RATIONALE:

The Chemical Reaction Engineering lab is an essential component of the Chemical Engineering curriculum, providing students with the practical skills, critical thinking, and experimental knowledge needed to succeed in the chemical engineering industry. It enables them to gain a deeper understanding of chemical processes, reactor design, and optimization, which are crucial for designing safe, efficient, and economically viable industrial processes.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Describe the mechanisms and kinetics of chemical reactions in a controlled environment.
- Explain practical experience in operating various types of reactors (e.g., batch, continuous, plug flow, and CSTR).
- Develop skills in experimental design, data collection, and analysis of reaction rates
- Reinforce theoretical concepts learned in lectures (e.g., reaction rates, conversions, reactor design).

LIST OF EXPERIMENTS:

Sl No.	Name of Experiments
1	Demonstrate the operation of Batch reactor
2	Demonstrate the operation of Plug flow reactor
3	Demonstrate the operation of Mixed flow reactor
4	Demonstrate the operation of Combined reactor: Mixed flow -plug flow
5	Demonstrate the operation of Combined reactor: Plug flow -mixed flow

PR:2- MASS TRANSFER –II LAB

L	T	P	Total Marks: 50	Course Code: CHEPC307
0	0	4		Practical Assessment
Total Contact Hours				End Exam 15
Practical : 60Hrs				Progressive Assessment : 35
Pre Requisite : Nil				
Credit 2				Category of Course: PC

RATIONALE:

Mass transfer is one of the basic tenets of chemical engineering, and contains many practical concepts that are utilized in countless industrial applications. Students will learn the principle of mass transfer operation through practically using Laboratory equipment used in the process industry.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Describe working, construction and operation of Cooling Tower, Driers, Crystallizers used in industry
- Explain the principle of mass transfer used in the Process industry

LIST OF EXPERIMENTS:

Sl No.	Name of Experiments
1	Demonstrate the operation of a Cooling Tower
2	Demonstrate operation of a Tray
3	Demonstrate operation of a Fluidized bed dryer
4	Demonstrate the operation of Open Pan Crystallizer
5	Demonstrate operation of Swenson-Walker Crystallizer
6	Demonstrate the operation of Liquid-liquid Extraction
7	Demonstrate the operation of Solid-Liquid Extraction

REFERENCES:

1.	Lab Manual
2.	Treybal, Mass transfer operation, Tata McGraw Hill

TH:3(A)- ENERGY ENGINEERING

L	T	P	Total Marks: 100	Course Code: CHEPE301(A)
3	0	0		
Total Contact Hours				Theory Assessment
Theory : 45 Hrs				End Term Exam 70
				Progressive Assessment : 30
Pre Requisite : Nil				
Credit 3				Category of Course: PE

RATIONALE:

The primary purpose of energy engineering is to optimize the production and use of energy resources while minimizing energy waste and reducing environmental impact. It addresses the crucial role in optimizing energy production, distribution, and consumption to achieve sustainable development and address global challenges like climate change and energy security.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Identify different types of fuel sources for energy production.
- Appreciate the advantages of energy production from renewable energy resources.

COURSE CONTENT DETAILS:

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
UNIT-I	Fuels: Classification, Properties, tests and analysis; Coal- origin, classification, storage and handling, carbonization, gasification and briquetting - gasification of biomass.	15
UNIT-II	Liquid fuels: Petroleum based fuels, synthetic fuels, alcohol and blended fuels, storage and handling.	6
UNIT-III	Gaseous fuels: Water gas, carbureted water gas, producer gas, coal gas and natural gas.	5
UNIT-IV	Combustion: Air requirement for solid, liquid and gaseous fuels, Combustion equipment	6
UNIT-V	Renewable energy sources: Solar energy, Wind energy, Tidal energy, Hydropower, Geothermal energy, Nuclear energy.	13
Total		45

TH:3(B)- PROCESS CONTROL & INSTRUMENTATION

L	T	P	Total Marks: 100	Course Code: CHEPE301(B)
3	0	0		Theory Assessment
Total Contact Hours				End Term Exam 70
Theory : 45 Hrs				Progressive Assessment : 30
Pre Requisite : Nil				
Credit 3				Category of Course: PE

RATIONALE:

Process Control and Instrumentation in the Diploma Engineering curriculum is essential for producing skilled technicians capable of handling modern industrial operations. This subject equips students with knowledge of measurement systems, sensors, controllers, and automation techniques vital for process industries. It enhances their ability to monitor, regulate, and optimize processes with safety and efficiency. By integrating theory with practical applications, it strengthens employability, supports industrial automation, and aligns technical education with current industry demands.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Construct a model of the chemical processes and other elements used in feedback control systems from first principles leading to the development of transfer function models
- Compute the response of the developed transfer function for various forcing functions providing an understanding of the transient response of the system
- Derive transfer function models of controllers and compute the transient response under closed loop conditions.
- Evaluate the stability of the control system given a mathematical model of a control system including its components and different instrumentations used in Process Industries.

COURSE CONTENT DETAILS:

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
UNIT-I	Laplace transforms - properties of Laplace transform, solution of linear differential equations using Laplace transform techniques, piecewise continuous functions	6
UNIT-II	Dynamic behaviour of systems - derivation of transfer functions for first and second order systems, liquid level, temperature, pressure, flow and concentration control processes, linearization of nonlinear systems, interacting and non-interacting systems.	10
UNIT-III	Transient response of first and second order systems, natural frequency, damping factor, overshoot, decay ratio, rise time and settling time.	7
UNIT-IV	Transient analysis of control systems - block diagram algebra, overall transfer function of closed loop control systems, regulator and servo problems, transient response of first and second order systems with P, PI and PID controller. Definition of stability of control systems, Routh test, limitations of Routh test.	12

UNIT-V	Principles of measurements and classification of process instruments, measurement of temperature, pressure, fluid flow, liquid weight and weight flow rate, viscosity, pH, concentration, electrical and thermal conductivity, humidity of gases.	10

TH:3(C)- INSTRUMENTAL METHOD OF ANALYSIS

L	T	P	Total Marks: 100	Course Code: CHEPE301(C)
3	0	0		Theory Assessment
Total Contact Hours				End Term Exam 70
Theory : 45 Hrs				Progressive Assessment : 30
Pre Requisite : Nil				
Credit 3				Category of Course: PE

RATIONALE:

Introducing Instrumental Methods of Analysis in the curriculum is vital to provide students with modern analytical skills required in industries and research. This subject imparts knowledge of advanced techniques such as spectroscopy, chromatography, and electrochemical methods, ensuring accuracy and reliability in analysis. It bridges theory with practical applications in chemical, pharmaceutical, food, and environmental fields. By learning these methods, students become industry-ready, capable of quality control, innovation, and contributing to scientific and industrial advancement.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Gain knowledge about the qualitative and quantitative instrument analysis of different materials.
- Understand the principle in Instrumentation techniques

Various Instruments and its applications

COURSE CONTENT DETAILS:

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
UNIT-I	INTRODUCTION OF SPECTROMETRY: Properties of electromagnetic radiation- wave properties- components of optical instruments – Sources of radiation – wavelength selectors – sample containers – radiation transducers – Signal process and read outs – signal to noise ratio – sources of noise – Enhancement of signal to noise – types of optical instruments – Principle of Fourier Transform optical Measurements.	9
UNIT-II	MOLECULAR SPECTROSCOPY: Molecular absorption spectrometry – Measurement of Transmittance and Absorbance – Beer's law – Instrumentation – Applications -Theory of fluorescence and Phosphorescence –Instrumentation – Applications – Theory of Infrared absorption spectrometry – IR instrumentation – Applications – Theory of Raman spectroscopy – Instrumentation – applications.	10
UNIT-III	MAGNETIC RESONANCE SPECTROSCOPY AND MASS SPECTROMETRY: Theory of NMR – environmental effects on NMR spectra – chemical shift- NMR spectrometers – applications of ^1H and ^{13}C NMR- Molecular mass spectra – ion sources – Mass spectrometer. Applications of molecular mass – Electron paramagnetic resonance- g values – instrumentation.	8

UNIT-IV	SEPARATION METHODS: General description of chromatography – Band broadening and optimization of column performance- Liquid chromatography – Partition chromatography – Adsorption chromatography – Ion exchange chromatography -size exclusion chromatography- Affinity chromatography- principles of GC and applications – HPLC- Capillary electrophoresis – Applications.	10
UNIT-V	ELECTRO ANALYSIS AND SURFACE MICROSCOPY: Electrochemical cells- Electrode potential cell potentials – potentiometry reference electrode – ion selective and molecular selective electrodes – Instrument for potentiometric studies – Voltametry – Cyclic and pulse voltametry- Applications of voltametry. Study of surfaces – Scanning probe microscopes – AFM and STM.	8

TH:4(A)- PETROLEUM REFINING & PETROCHEMICAL TECHNOLOGY

L	T	P	Total Marks: 100	Course Code: CHEPE303(A)
3	0	0		Theory Assessment
Total Contact Hours				End Term Exam 70
Theory : 45 Hrs				Progressive Assessment : 30
Pre Requisite : Nil				
Credit 3				Category of Course: PE

RATIONALE:

Petroleum Refining and Petrochemical Technology in the Chemical Engineering curriculum is essential for preparing students to meet the growing demands of the energy and chemical industries. This subject provides a comprehensive understanding of the processes involved in transforming crude oil into valuable products and the subsequent production of petrochemicals.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Develop overview of petroleum industry and know about origin, formation composition and characterization of crude oil.
- Comprehend primary processing mechanisms of crude to obtain various petroleum cuts.
- Explain secondary conversion techniques and treatment processes in petroleum refinery to get products of desired yield and quality
- Describe manufacturing processes and applications of various petrochemicals
- Grasp environmental and safety aspects in petroleum refinery and petrochemical industries.

COURSE CONTENT DETAILS:

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
UNIT-I	Introduction to Petroleum: Origin & formation of crude oil, Composition of crude oil; Properties of petroleum products: API Gravity, Flash point, Fire point, Pour point, Cloud point, Smoke point, Aniline point, Reid Vapour pressure, Octane number, Cetane number; Dehydration and desalting of crudes; General mechanisms for removal of Sulphur.	8
UNIT-II	Primary Processing: Atmospheric distillation, Vacuum distillation, Treatment of LPG, Gasoline, Kerosene, Diesel and Lube oils; Properties of ATF and Bitumen.	11
UNIT-III	Secondary Processing: FCCU, Thermal cracking; Hydro cracking; Visbreaking, Coking, Reforming, Alkylation, Isomerization and polymerization processes.	12

UNIT-IV	Petrochemical: Building blocks, intermediates, major petrochemical and their applications,	6
UNIT-V	Chemicals from methane and synthesis gas; Chemicals from Olefins; Chemicals from aromatics; Synthetic fibres; plastics and rubber.	8
Total		45

TH:4(B)- MODERN SEPARATION TECHNIQUES

L	T	P	Total Marks: 100	Course Code: CHEPE303(B)
3	0	0		Theory Assessment
Total Contact Hours				End Term Exam 70
Theory : 45 Hrs				Progressive Assessment : 30
Pre Requisite : Nil				
Credit 3				Category of Course: PE

RATIONALE:

Modern Separation Techniques play a key role in today's industries, helping to obtain pure products with high efficiency. Introducing this subject in diploma courses will give students practical knowledge of methods like membrane separation, chromatography, and adsorption. These techniques are widely used in chemical, food, pharmaceutical, and environmental sectors. Learning them will make students more skilled, industry-ready, and capable of contributing to innovation and sustainable practices.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Differentiate the conventional techniques and modern techniques
- Understand the principles of modern separation techniques
- Application of this techniques in Industries
- Identify the importance of economics involved in its applications

COURSE CONTENT DETAILS:

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
UNIT-I	Thermal Diffusion: Basic Rate Law, Theory of Thermal Diffusion Phenomena for gas and liquid mixtures, Equipment design and Applications. Zone Melting	10
UNIT-II	Chromatographic techniques, Equipment and Commercial processes, Molecular Sieves.	6
UNIT-III	Cryogenic, Supercritical fluid extraction and Azeotropic separation	7
UNIT-IV	Principle of membrane separations process; Classification: Reverse osmosis, Ultra-filtration, Micro-filtration, Nano-filtration and Dialysis; Membrane modules and application; Electro-dialysis; Per-vaporation and gas separation using membranes; Electrophoresis; Liquid membranes.	15
UNIT-V	Foam and bubble separation: Principle; Classification; Separation techniques; Column operations, Surface Adsorption, Nature of foams.	7

TH:4(C)- PHARMACEUTICAL TECHNOLOGY

L	T	P	Total Marks: 100	Course Code: CHEPE303(C)
3	0	0		Theory Assessment
Total Contact Hours				End Term Exam 70
Theory : 45 Hrs				Progressive Assessment : 30
Pre Requisite : Nil				
Credit 3				Category of Course: PE

RATIONALE:

The progress in the field of Pharmaceutical Industry has been spectacular as substantial technical and scientific growth in the basic sciences has widened its horizons. The recent advances in the field of basic genetics have opened up new vistas, potentials and possibilities. The primary function of the research-based pharmaceutical corporations is to create value by discovering and producing effective medicines, vaccines and services that improve patients' well-being, and can be sold in markets at a profit. Highly proliferating genetic engineering, concepts of bio-cellular synthesis, bioprocesses, immunization, gene cloning for organ culture, monoclonal antibodies as piloting modules in targeted drug delivery, have become reality now. Pharmaceutical Industry has boomed in India due to the various reasons like clinical research, research and development related to various vaccines, etc.

LEARNING OUTCOMES:

After completion of the study of pharmaceutical technology the student will be able to know about:

- the significance and growth of pharmaceutical industry
- the relationship between pharmacy and biotechnology.
- the different economically important enzymes and their role in industries.
- gene therapy and its application for the treatment of different diseases.
- different types of drugs and their process of targeting inside the cell.
- pharmaceutical applications in cell culture.

COURSE CONTENT DETAILS:

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
UNIT-I	Introduction to Pharmacy: History of pharmacy; Pharmaceutical industry & development of drugs; Some common terms in pharmacy; Quality management in pharmacy	5
UNIT-II	Drug Kinetics and Bio-Pharmaceutics: Mechanism of drug absorption, distribution, metabolism and excretion; Factors affecting the ADME process; Bioequivalence	5
UNIT-III	Principles of Drug manufacture: Liquid dosage forms-solutions, suspensions and emulsions; Topical applications – ointments, creams, suppositories; Solid dosage forms – powders, granules, capsules, tablets; Elementary idea about antibiotics, sulpha drugs, analgesics, synthetic drugs on antimalarial and antiTB, vitamins and synthetic hormones.	12
UNIT-IV	Biopharmaceuticals: Principles of pharmacology; Pharmacokinetics and Pharmacodynamics; Study of a few classes of therapeutics like Recombinant therapeutics, Monoclonal Antibodies, Vaccines, Gene therapy, Antibiotics and Hormones.	10

UNIT-V	Immunogenicity of biopharmaceuticals: Immunogenicity; Factors contributing to immunogenicity (product related factors, host-related factors); Case studies: Erythropoietin, Insulin, DNase, Factor VIIa, Factor IX, Activated protein C, Monoclonal antibodies etc.	13
Total		45

PR:3(A)- COMPUTER APPLICATIONS IN CHEMICAL ENGINEERING

L	T	P	Total Marks: 50	Course Code: CHEPE305(A)
0	0	4		
Total Contact Hours				Practical Assessment
Practical : 60Hrs				End Exam 15
				Progressive Assessment : 35
Pre Requisite : Nil				
Credit 2				Category of Course: PE

RATIONALE:

Computer applications play a vital role in modern Chemical Engineering by enhancing analysis, design, and process optimization. Introducing this subject equips students with practical skills in spreadsheets, databases, simulation, and mathematical programming to solve engineering problems efficiently. It enables accurate calculations for material balances, reaction kinetics, statistical analysis, and process modeling. By integrating computational tools with theoretical knowledge, students become industry-ready, improve problem-solving abilities, and contribute to innovation, automation, and sustainable industrial practices.

LEARNING OUTCOMES:

On completion of the course the students will be able to know the importance of software to control the process in industries and applications related to mathematical modeling.

LIST OF EXPERIMENTS:

Sl No.	Name of Experiments
1	Calculate molecular weight and % composition of elements from chemical formulas on a spreadsheet.
2	Solve problems using $PV = nRT$; plot P–V and T–V graphs.
3	Compute heat effects for mixing of solutions; visualize results in graphs.
4	Enter concentration vs. time data, calculate rate constants, plot reaction curves.
5	Analyze sieve analysis data, calculate mean particle diameter, standard deviation, and plot graphs.
6	Design database for physical and chemical properties; query and generate reports
7	Input plant/process data; prepare material and energy balance sheets.
8	Perform regression, interpolation, and ANOVA on chemical engineering lab data.

PR:3(B)- FUEL TECHNOLOGY LAB

L	T	P	Total Marks: 50	Course Code: CHEPE305(B)
0	0	4		Practical Assessment
Total Contact Hours				End Exam 15
Practical : 60Hrs				Progressive Assessment : 35
Pre Requisite : Nil				
Credit 2				Category of Course: PE

RATIONALE:

The Fuel Technology Laboratory is a vital component of the Chemical Engineering curriculum, designed to provide students with practical experience in the analysis, characterization, and processing of various fuels. This hands-on approach bridges theoretical knowledge with real-world applications, preparing students for the complexities of the energy sector.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

- Analyze and interpret the physical and chemical properties of different fuels.
- Provide hands-on experience in fuel processing techniques, including refining and upgrading methods.
- Instill a strong understanding of safety measures when handling and experimenting with fuels.

LIST OF EXPERIMENTS:

Sl No.	Name of Experiments
1	Determine the Density, Specific gravity and API gravity of given petroleum and petroleum fraction.
2	Determine the flash and fire point of a given fuel by Abel's apparatus or Pensky Marten apparatus.
3	Determine the cloud point and pour point of lubricating oil.
4	Determine the aniline point of a fuel.
5	Determine the viscosity of a given sample oil by using Redwood viscometer.
6	Determine the vapour pressure of a give sample by using Reid vapour pressure apparatus.
7	Determine the smoke point of an illuminating oil to test its ability to burn without producing smoke using a smoke point apparatus.
8	Determine the calorific value of fuels using Bomb Calorimeter.

TH:5(A)- UNIVERSAL HUMAN VALUES

L	T	P	Total Marks: 100	Course Code: OE301
3	0	0		
Total Contact Hours				Theory Assessment
Theory : 45Hrs				End Term Exam 70
				Progressive Assessment : 30
Pre-Requisite : Nil				
Credit 3				Category of Course: OE

RATIONALE:

The Universal Human Values (UHV) course is designed to help diploma students develop a strong ethical foundation, nurturing responsible individuals who contribute positively to society. In an era driven by rapid technological advancements, it is crucial for students not only to gain technical expertise but also to cultivate values that promote harmony, respect, and sustainability.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Identify fundamental human aspirations such as happiness and prosperity.
- Differentiate between the self and the body and understand their respective needs.
- Practice self-reflection to improve decision-making, emotional balance, and personal growth.
- Develop respectful and trustworthy relationships within family, friends, and society.
- Explain the role of values like trust, respect, and love in building strong social bonds.
- Promote cooperation and harmony within communities through ethical practices.

DETAILED COURSE CONTENTS:

Unit No.	Topic/Sub-Topic	Allotted Time (Hours)
I	Introduction to Value Education and Human Values: Concept and Need for Value Education - Understanding the importance of value education in personal and professional life, Differentiating between values and skills. Basic Human Aspirations - Exploring fundamental human aspirations: happiness and prosperity, Methods to achieve these aspirations through right understanding and relationships.	8
II	Harmony in the Human Being: Understanding the Self - Differentiating between the 'Self' (I) and the Body, Understanding the needs of the Self and the Body, Harmony of the Self with the Body - Ensuring the harmony of 'I' with the Body, Practices for mental and physical well-being.	8
III	Harmony in the Family and Society: Family as the Basic Unit of Society - Understanding values in human relationships, Trust and respect as the foundational values in relationships, Harmony in Society - The concept of an undivided society, Universal human order and world family.	8

IV	Harmony in Nature and Existence: Interconnectedness in Nature - Understanding the four orders of nature: material, plant, animal, and human, Mutual fulfillment among these orders, Co-existence in Existence - Holistic perception of harmony in existence, Role of human beings in maintaining environmental balance.	8
V	Professional Ethics: Ethical Human Conduct - Integrating values into professional life, Concept of professional ethics and accountability, Case Studies in Professional Ethics - Analyzing real-life scenarios to understand ethical dilemmas, Developing solutions based on universal human values.	8

VI	Industry and Field-Specific Knowledge: Lectures, seminars, or presentations on industry trends, best practices, and emerging technologies. Guest speakers from the field to share insights and experiences.
VII	Reporting and Documentation: Training on how to document project progress, results, and findings. Practice in creating reports, presentations, or other deliverables.
VIII	Ethics and Professionalism: Discussions on ethical considerations within the field. Scenarios and case studies related to ethical decision-making
IX	Feedback and Evaluation: Regular performance evaluations and feedback sessions. Self-assessment and goal-setting exercises.
X	Networking and Industry Exposure: Opportunities to attend industry conferences, webinars, or networking events. Encouragement to connect with professionals in the field.

NOTE

As per AICTE guidelines, in Summer Internship-I, students are required to be involved in Inter/ Intra Institutional Activities viz;

- Training with higher Institutions;
- Soft skill training organized by Training and Placement Cell of the respective institutions;
- contribution at incubation/ innovation /entrepreneurship cell of the institute;
- participation in conferences/ workshops/ competitions etc.;
- Learning at Departmental Lab/ Tinkering Lab/ Institutional workshop;
- Working for consultancy/ research project within the institutes;
- Participation in all the activities of Institute's Innovation Council for eg: IPR workshop/Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/ Technical Expos etc.

PR:4- MAJOR PROJECT

L	T	P	Total Marks: 50	Course Code: PR301
0	0	4		Project Assessment
Total Contact Hours				End Term Exam 15
Project : 60Hrs				Progressive Assessment 35
Pre Requisite : Nil				
Credit 2				Category of Course: PR

RATIONALE:

A Major project is generally requires a larger amount of effort and more independent work than that involved in a normal assignment. It requires students to undertake their own fact-finding and analysis. The students will select the topic, perform and design work. Major project is as preparation for the students to take on more responsibilities and bigger project in the future. It is a learning experience, which aims to provide students with the opportunity to synthesize knowledge from different areas of learning, and critically and creatively apply it to real life situations. The leadership quality, co-ordination of job and maintaining good communal harmony is an important factor of this type of activity.

LEARNING OUTCOMES:

After completion of the course, the students will be able to

1. Plan a Major Project
2. Execute a Major Project with team.
3. Implement hardware/software/analytical/numerical techniques, etc. based on project requirements.
4. Optimize time related works through sharing of work responsibility
5. Develop cost awareness and utilization of fund.
6. Prepare a technical report on the project.

GUIDELINES FOR MAJOR PROJECT

Unit No.	Topic/Sub-Topic
I	○ Minimum three and maximum five students can form a group for the minor project.
II	○ Project type can include ● Development of a simple prototype system/product. ● Investigation of performance of some systems using experimental method ● Analysis of components/systems/devices using suitable software ● Investigation of optimum process/material for product development using market survey. ● Solution for society/industry problems

III	○ Project domain may not be limited to the specific area / discipline.
IV	○ Project report to be prepared and submitted by the students with following components: 1. Title 2. Objectives 3. Relevance and significance 4. Methodology 5. Analysis-Simulation/experimentation/survey/testing etc. 6. Result and Discussion 7. Conclusion
